- Download Resumes
- View Followers
- Send Message to Candidates
- View Messages from Candidates

INSTALLATION

Please note that this is Laravel 5.6+ application so experience with this framework and server configuration is required with php 7.1+ version.

UPLOAD FILES

The Package consists on a complete Laravel + Database File + Sample Content, excellent for beginner users to explore back-end settings and sample content. Follow this quick guide:

Setting Up on Localhost: create a new folder in the HTDOCS folder for Xampp (www folder for Wamp).

Example: Careers

Unpack all files and folders of the Package file and copy Careers files into this newly created folder (htdocs folder for Xampp / www folder for Wamp) or upload them into your domain folder on your live site.

DATABASE

First create new database and import SQL files located in DB folder, after that open ENV file located on main root of your folder and change following value

APP_URL=HTTP://LOCALHOST//YOURURL

DB_DATABASE= YOUR DATABASE NAME

User manual

DB_USERNAME= YOUR USERNAME

DB_PASSWORD= YOUR PASSWORD

Now access the site with localhost type localhost/yourfoldername/public and for server type http://your domain.com/your folder name/public

To access the admin side the admin login should like as:

Admin user login:

Username: admin@admin.com

Password: @dmin123

Job seeker login:

Username: candidate@career.com

Password: c@ndidate123
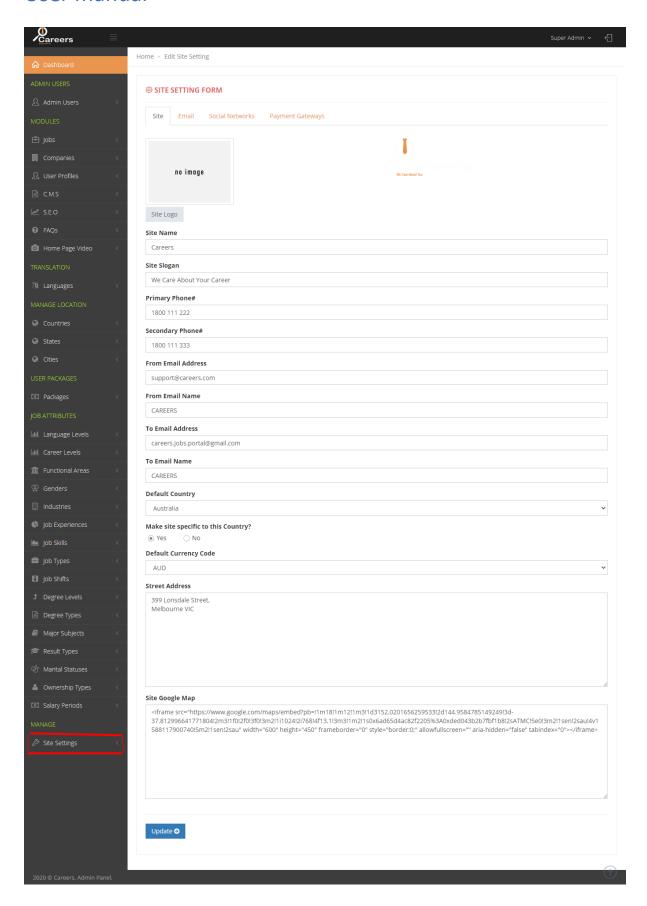

Employer login:

Username: employer@career.com

Password: emp@123

Get started

Login into admin and go to end of left links you will see link "site setting"

Site setting, email, social networking, payment gateway

This system has been developed successfully to incorporate all the requirements. Appropriate care has taken during database design maintain database integrity and to avoid redundancy of data. This site was developed in such a way that any further modifications needed can be easily done. User feels freely while using this site. In this all technical complexities are hidden. This site is a more user friendly. The quality of uses like correctness, efficiency, usability, maintainability, portability, accuracy, errors, tolerance, expandability and communicatively all are successfully done.

User manual

Foreseeable enhancements

There is always a room for improvement in any software package, however good and efficient it may be. The important thing is that the website should be flexible enough for further modifications. Considering this important factor, the web site is designed in such a way that the provisions are given for further enhancements. At present this website provides all the information using static pages and reservation forms. In future we can enhance our project by providing options like. Include many sites information.

Foreseeable enhancements
